

How to open brackets and start the application server

1. Open brackets - File → Open Folder... → select code-samurai-app → Open

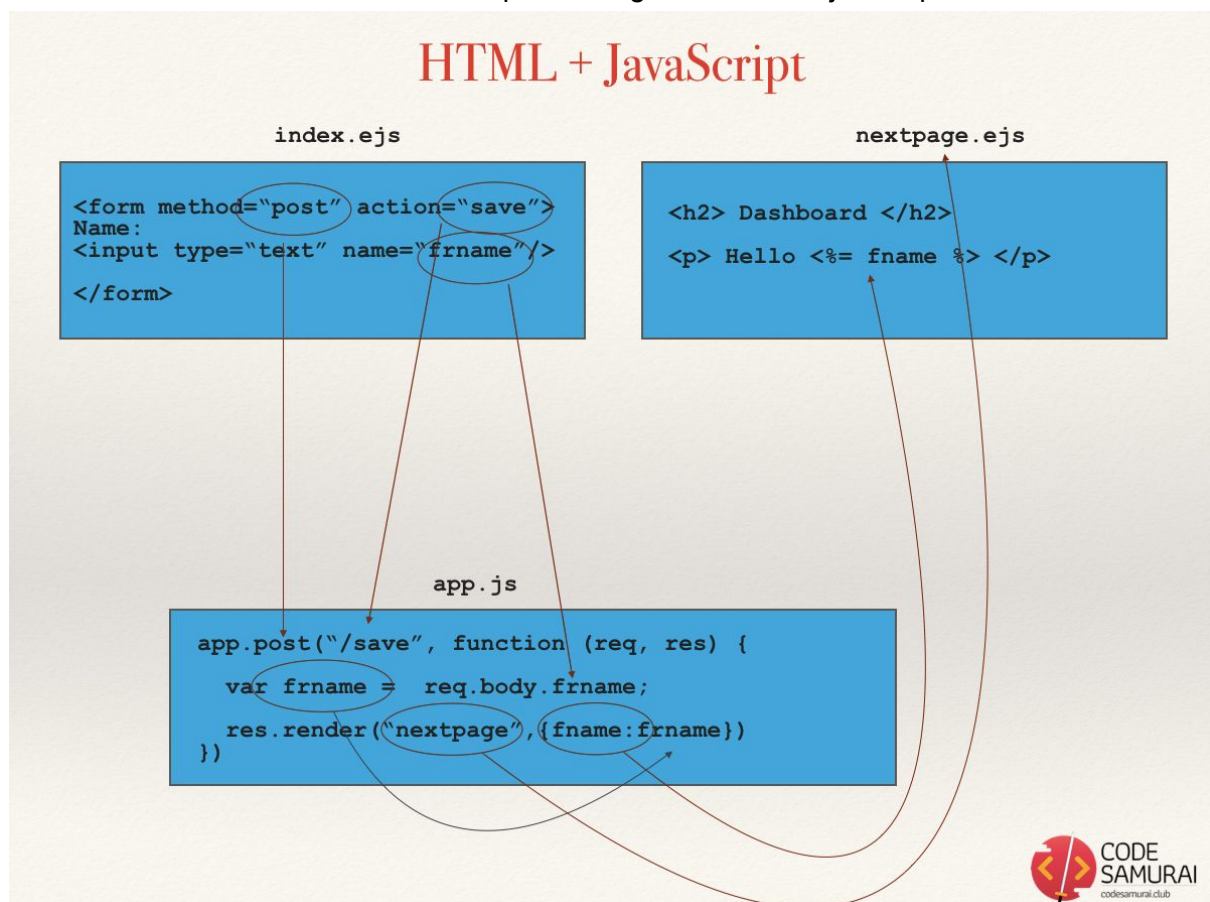

2. Click  to open the Git panel

3. Now click the terminal icon  to open black terminal window

4. Type **npm run live** and hit enter to start the application

5. Open Chrome and go to <http://localhost:7000> to load the application

Remember how a HTML and JavaScript work together in Node.js + Express frameworks

Go to <https://materializecss.com/> to get samples on

- HTML tags
- Styling
- Colors
- Icons

## **Remember JavaScript concepts**

### Variables

- Ideally should start with **var** and then space and then name
- Should not have space or special characters in the name
- Use = sign to store value in it
- Try to copy/paste names to avoid mistakes

### Functions

- Ideally should start with **function** and then space and then name
- Should not have space or special characters in the name
- Use on right side of = sign to get result from function and store in variable on left
- Try to copy/paste names to avoid mistakes

### Console.log()

- Use this function to print values of variable
- Can we used to print simple things like "here" to know if your code is being executed at that spot
